Maslow's Hierarchy of Needs (1970)

- Theory of motivation that suggests individuals have a hierarchy of five needs. As each need is met, individuals tend to move up to the next level. The levels are:
  - Physiological: Basic needs for survival, such as food, water, and shelter.
  - Safety: Security and stability, including personal safety, financial security, and health.
  - Belonging: Social connections, love, affection, and intimacy.
  - Esteem: Respect, recognition, achievement, and self-worth.
  - **Self-actualization**: The realization of one's full potential and the pursuit of personal growth.

Intrinsic Versus Extrinsic Motivation

- **Intrinsic motivation** comes from internal factors like self-expression and enjoyment. For example, you might enjoy reading a book or find your job stimulating.
- **Extrinsic motivation**, on the other hand, is driven by external factors like rewards or punishments, such as finishing a book to meet a deadline or working for the money.

Table 4.1 Examples of intrinsic and extrinsic motivation

Intrinsic	Extrinsic
Behaviour motivated by intrinsic factors such as self-expression, interest, and enjoyment.	Behaviour motivated by extrinsic factors such as the promise of reward or threat of punishment.
Motivated to finish reading because you are interested.	Motivated to finish reading to meet a deadline.
Working because you find the job stimulating and enjoyable.	Working because you need the money.
Changing jobs because you want the challenge.	Changing jobs because you are certain you will be fired.
Motivated to work in difficult jobs that challenge you.	Motivated to work in difficult jobs to get the pay rise.
Study to improve yourself.	Study to get a high-paying job.

Self-Determination Theory (SDT)

- Self-determination theory (SDT) is a theory of motivation that emphasizes our intrinsic need to be seen as competent, liked and free from the control of others.
- In SDT, the social context is crucial.
- The satisfaction of the needs for competence, relatedness, and autonomy is influenced by the social environment.
- To foster intrinsic motivation, it's important to create environments where individuals feel competent, connected, and autonomous.

Deci, E. L., & Ryan, R. M. (2000). Self-determination theory and the facilitation of intrinsic motivation, social development, and well-being. *American Psychologist, 55*(1), 68-70.
