University of Wollongong
CSIT314: Software Development Methodologies

ASSESSMENT COVER SHEET

Student Name	**Student No (UOW)**	**Tutorial**
Joseph Koh (Leader)	1441309	T02
Delia	7430899	T02
De Chuan	1104299	T02
See Kai Che	8887640	T02
Hoi Zhe Kang	8875911	T02

Tutor name: Mr. Terence Chew
Group Name: Mag5
Assessment: Group Project

STUDENTS DECLARATION

I declare that this assessment is entirely my own work and has not been submitted for assessment in any other subject or course. This work complies with the University of Wollongong's Academic Integrity Policy.

Signature: Joseph Koh

Date: 11/11/2026

Team Contribution

Student Name	Role	Workload	Contribution (%)
Joseph Koh (Leader)	Developer	Backend Development	100%
Delia	Business Analyst	Usecase, BCE & Sequence diagrams	100%
De Chuan	UX Designer	Wireframe design, Usecase, BCE & Sequence diagrams	100%
See Kai Che	Developer	Frontend Development	100%
Hoi Zhe Kang	Developer	Frontend Development	100%

2. Meeting Minutes

MEETING MINUTES

1. Meeting Details

Item(s)	Details
Meeting TItle	Team Mag5 Meeting Minute
Date	9 October
Time	6.30pm - 7.00pm
Members	Joseph, Kai Che, Zhe Kang, Delia, De Chuan
Minute Taker	Kai Che

2. Attendance

All are present

3. Meeting Agenda

To assign team role and split work load

4. Action Items

To start sprint 1 (9 Oct to 16 Oct) doing user story 1 to 12

To start sprint 2 (16 Oct to 23 Oct) doing user story 13 to 24

To start sprint 3 (23 Oct to 30 Oct) doing user story 23 to 51

After sprint 3, start integration and do report

5. Key Decisions

Joseph will be the group leader and backend developer. Kai Che and Zhe Kang will be the front-end developers. De chuan will be the UX Designer and Delia will be the business analyst managing the diagrams and reports.

3. User Stories

Epic	User Stories
EPIC01 — Admin Management	US1 — As a user Admin, I want to login, so that I can manage users
EPIC01 — Admin Management	US2 — As a user Admin, I want to logout, so that I can stop using my account
EPIC01 — Admin Management	US3 — As a user Admin, I want to create a user profile, so that I can set my profile information
EPIC01 — Admin Management	US4 — As a user Admin, I want to view my user profile, so that I can review my profile information
EPIC01 — Admin Management	US5 — As a user Admin, I want to update my user profile, so that my latest information is shown
EPIC01 — Admin Management	US6 — As a user Admin, I want to delete my user profile, so that I can remove my account from the system
EPIC01 — Admin Management	US7 — As a user Admin, I want to search for an admin profile, so that I can find the admin I want or need
EPIC01 — Admin Management	US8 — As a user Admin, I want to create a user account, so that I can create a new user
EPIC01 — Admin Management	US9 — As a user Admin, I want to view a user account, so that I can review the user's details
EPIC01 — Admin Management	US10 — As a user Admin, I want to update a user account, so that the latest information is shown
EPIC01 — Admin Management	US11 — As a user Admin, I want to suspend a user account, so that the account cannot be used to login
EPIC01 — Admin Management	US12 — As a user Admin, I want to search for a user account, so that I can find the account I want or need
EPIC02 — Platform Management	US13 — As a Platform management, I want to login so that I can manage IDP categories
EPIC02 — Platform Management	US14 — As a Platform management, I want to logout so that I can stop using the account
EPIC02 — Platform Management	US15 — As a Platform management, I want to create a IDP category so that I can group the projects with similar project type
EPIC02 — Platform	US16 — As a Platform management, I want to view IDP categories so

Management	that I can see current existing categories
EPIC02 — Platform Management	US17 — As a Platform management, I want to update IDP categories so that I can edit category details
EPIC02 — Platform Management	US18 — As a Platform management, I want to delete IDP categories so that I can remove unwanted categories
EPIC02 — Platform Management	US19 — As a Platform management, I want to search IDP categories so that I can easily find the category
EPIC02 — Platform Management	US20 — As a Platform management, I want to generate a daily report so that I can monitor the platform's daily activities and performance
EPIC02 — Platform Management	US21 — As a Platform management, I want to generate a weekly report so that I can monitor the platform's weekly activities and performance
EPIC02 — Platform Management	US22 — As a Platform management, I want to generate a monthly report so that I can monitor the platform's monthly activities and performance
EPIC03 — Interest Analytics	US23 — As a System, I want to record a view whenever a Customer views a project's details so that users can track the number of views the projects receive
EPIC03 — Interest Analytics	US24 — As a System, I want to record a shortlist whenever a Customer favorites a project so that users can track the number of shortlists the projects receive
EPIC04 — Interior Designer Management	US25 — As an Interior Designer, I want to register for an account so that I access the platform
EPIC04 — Interior Designer Management	US26 — As an Interior Designer, I want to login so that I can manage my account
EPIC04 — Interior Designer Management	US27 — As an Interior Designer, I want to logout so that I can stop using my account
EPIC04 — Interior Designer Management	US28 — As an Interior Designer, I want to create my company profile, so that I can add my company information
EPIC04 — Interior Designer Management	US29 — As an Interior Designer, I want to view my company profile, so that I can update company information
EPIC04 — Interior Designer Management	US30 — As an Interior Designer, I want to update my company profile, so that the latest company information is displayed
EPIC04 — Interior Designer Management	US31 — As an Interior Designer, I want to suspend my company profile, so that it is temporarily hidden from Customers
EPIC04 — Interior Designer	US32 — As an Interior Designer, I want to create an ongoing project in

Management	my portfolio, so that Customers can see the project that I am currently working on
EPIC04 — Interior Designer Management	US33 — As an Interior Designer, I want to view my ongoing projects in my portfolio, so that I can keep track of the projects I am currently working on
EPIC04 — Interior Designer Management	US34 — As an Interior Designer, I want to update my ongoing project details and design, so that I can keep my project information up to date
EPIC04 — Interior Designer Management	US35 — As an Interior Designer, I want to remove an ongoing project from my portfolio, so that I can remove projects that I am no longer working on
EPIC04 — Interior Designer Management	US36 — As an Interior Designer, I want to search for my ongoing projects, so that I can easily find the project I want to view
EPIC04 — Interior Designer Management	US37 — As an Interior Designer, I want to create a past project in my portfolio, so that Customers can see my previous work
EPIC04 — Interior Designer Management	US38 — As an Interior Designer, I want to view my past projects in my portfolio, so that I can use them as a reference
EPIC04 — Interior Designer Management	US39 — As an Interior Designer, I want to update my past project details and design, so that I can keep the project information up to date
EPIC04 — Interior Designer Management	US40 — As an Interior Designer, I want to remove a past project from my portfolio, so that I can manage my portfolio more effectively
EPIC04 — Interior Designer Management	US41 — As an Interior Designer, I want to search for my past projects, so that I can easily find the project I want to view
EPIC04 — Interior Designer Management	US42 — As an Interior Designer, I want to view the number of views of my interior design projects, so that I can identify trends in customer interest
EPIC04 — Interior Designer Management	US43 — As an Interior Designer, I want to view the number of times my projects have been added to Customers' shortlists, so that I can understand Customer preferences
EPIC05 — Customer Management	US44 — As a Customer, I want to register for an account so that I can access the platform
EPIC05 — Customer Management	US45 — As a Customer, I want to login so that I can use my account features
EPIC05 — Customer Management	US46 — As a Customer, I want to logout of my account so that I can stop using my account
EPIC05 — Customer	US47 — As a Customer, I want to search for interior design projects so

Management	that I can find projects that I am interested In
EPIC05 — Customer Management	US48 — As a Customer, I want to view interior design projects so that I can see their details and designs
EPIC05 — Customer Management	US49 — As a Customer, I want to save interior design projects so that I can refer to them later on
EPIC05 — Customer Management	US50 — As a Customer, I want to view my saved interior design projects so that I can review the projects I have saved
EPIC05 — Customer Management	US51 — As a Customer, I want to search my saved interior design projects so that I can easily find the project I want to view
EPIC05 — Customer Management	US52 — As a Customer, I want to delete saved interior designed projects so that I can remove from my favorite list

4. Product Overview

4.1 Product

FindMyID is an interior design platform that connects customers with interior designers (ID), making it easier to discover, explore, and engage with design services.

The platform allows IDs to showcase their projects, and provide company information. Customers can browse, search and shortlist projects to find suitable IDs to bring their interior design ideas to life.

There are 4 types of users

- User Admin
- Platform Management
- Interior Designer
- Customer

The User admin's role is to manage user accounts. Platform management's role is to manage interior design project's categories and generate reports for business analytics and decision making. Interior Designers primarily showcase their projects to attract potential customers. Customers can browse, search, and shortlist interior design projects to find suitable designers.

4.2 Product Process

FindMyID follows a process that connects customers with interior designers through project discovery and engagement.

Step 1. User Registration and Authentication
Users register for an account by providing their required details and their role (customer or interior designer (ID)). The system validates the registration information and creates the user account.

Step 2. Company Profile Setup
After registration, ID can complete their company profiles by providing information such as company name, description, contact number, and address. The profile is made available to customers once it is active.

Step 3. Project Submission and Management
IDs creates their completed or ongoing interior design projects to the platform. The submitted projects are stored in the system and associated with the respective interior designer, allowing them to be displayed to potential customers.

Step 4. Project Discovery and Exploration
Customers browse or search for interior design projects based on available categories and other relevant information. They can view project details and explore the profiles of the designers responsible for those projects.

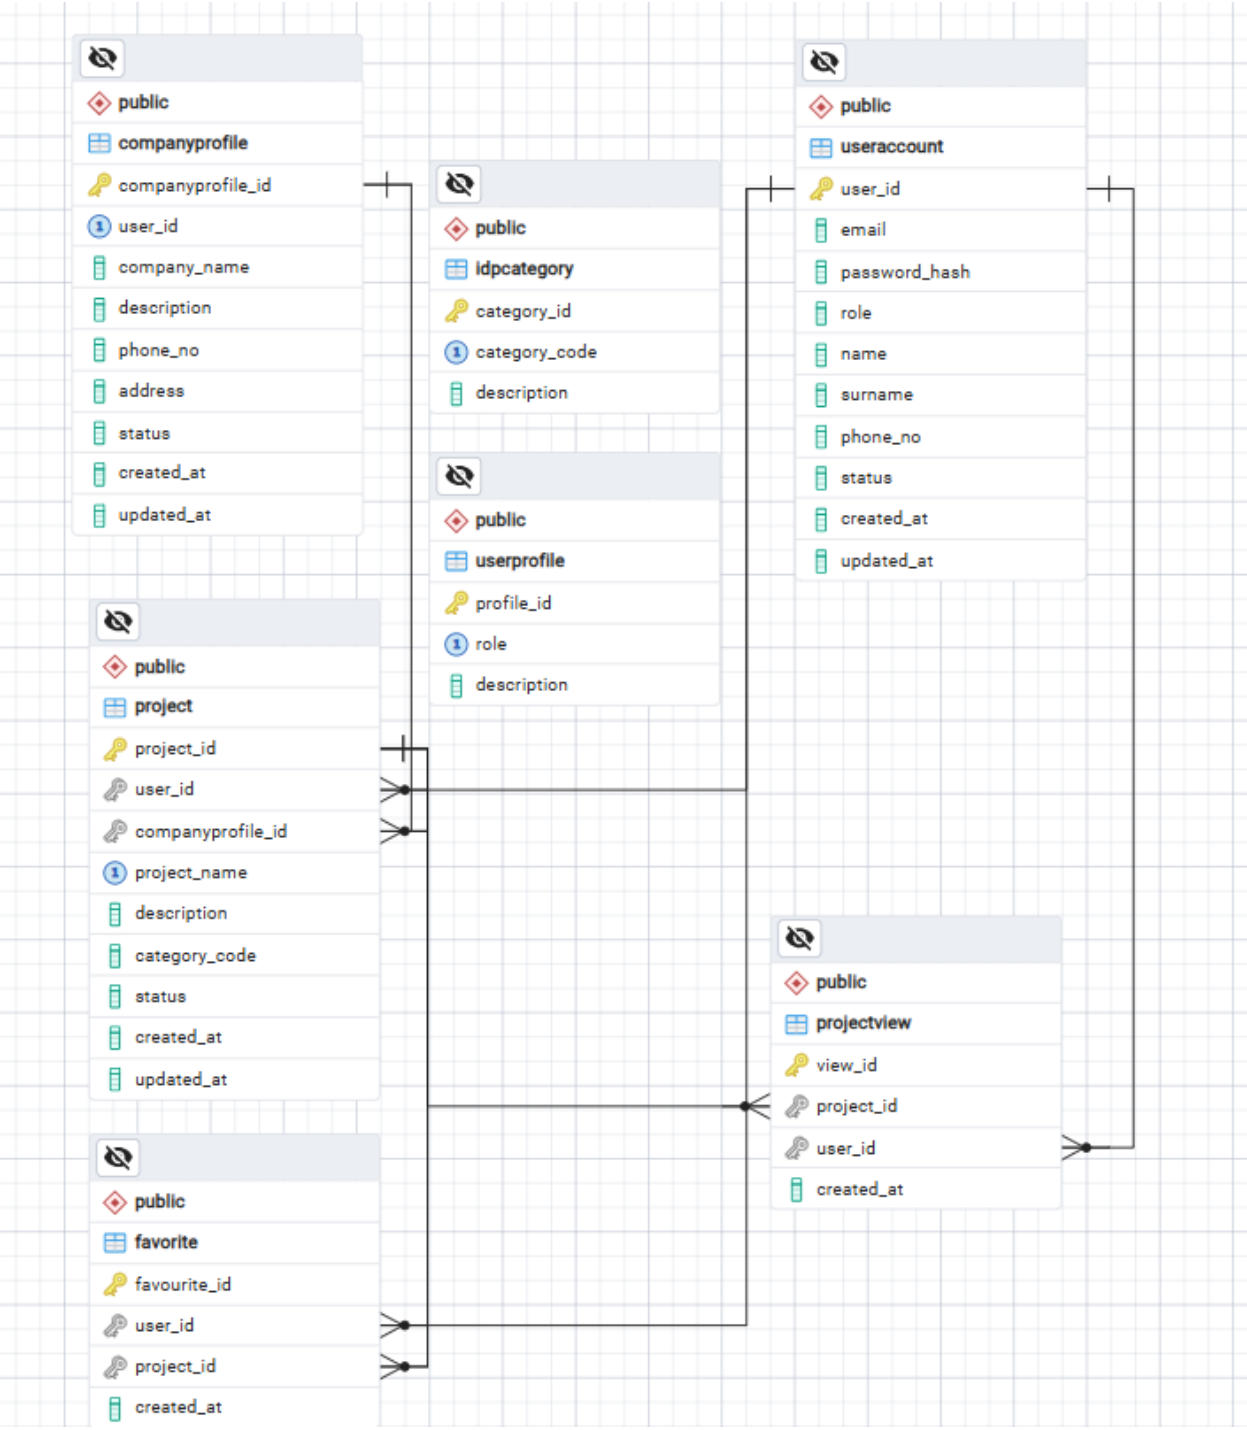

Step 5. Project Shortlisting
Customers can shortlist projects that interest them for future reference. The system stores these selections so customers can revisit and manage their shortlisted projects.

Step 6. Administration and Monitoring
The User admin maintains user accounts while the platform management manages interior design project categories and can also generate analytical reports collected by platform activity data, which can be used to generate business analytics.

Step 7. Data Integrity and Accuracy
The system ensures that information remains up to date through ongoing account, profile, and project management. Inactive or suspended accounts and **company** profiles are handled according to their respective statuses to maintain the reliability and visibility of platform information.

5. Data Persistence

Database ERD

5.1 UserAccount

useraccount		
Field	**Data Type**	**Notes**
user_id	INT	PK, auto-increment
email	VARCHAR(255)	UNIQUE, NOT NULL
password_hash	VARCHAR(255)	NOT NULL
role	ENUM('CUSTOMER','INTERIOR DESIGNER','ADMIN','PLATFORM MANAGEMENT')	NOT NULL
name	VARCHAR(100)	NOT NULL
surname	VARCHAR(100)	NOT NULL
phone_no	VARCHAR(30)	NOT NULL
status	ENUM('ACTIVE','INACTIVE')	NOT NULL, Default ACTIVE
created_at	DATETIME	NOT NULL, Automatic timestamp
updated_at	DATETIME	NOT NULL, Automatic timestamp

5.2 UserProfile

Userprofile		
Field	**Data Type**	**Notes**
profile_id	INT	PK, auto-increment
role	VARCHAR(100)	UNIQUE, NOT NULL
description	TEXT	NOT NULL

5.3 IdpCategory

Idpcategory		
Field	**Data Type**	**Notes**
category_id	INT	PK, auto-increment
category_code	VARCHAR(100)	NOT NULL
description	TEXT	NOT NULL

5.4 CompanyProfile

companyprofile		
Field	**Data Type**	**Notes**
companyprofile_id	INT	PK, auto-increment
user_id	INT	FK references useraccount(user_id), UNIQUE, NOT NULL
company_name	VARCHAR(150)	NOT NULL
description	TEXT	NOT NULL

10. Test Driven Development

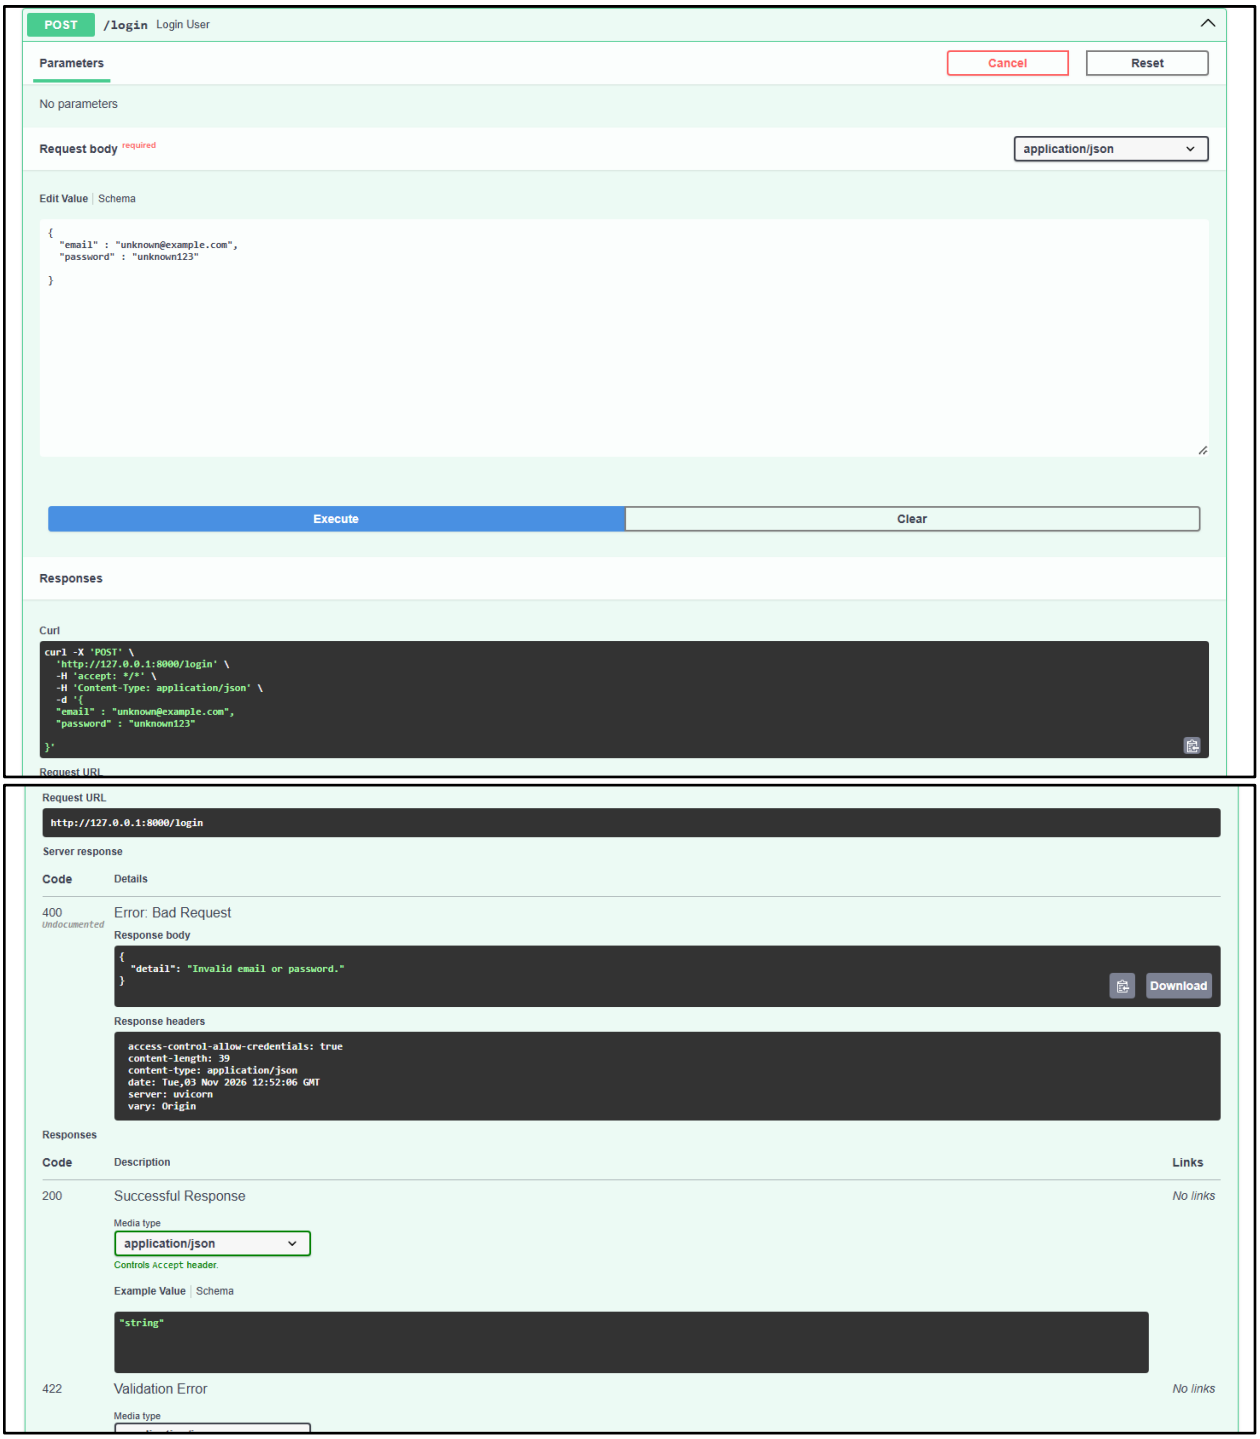

10.1 Functional Testing Snapshot

We use fastAPI swagger UI /docs to test and send requests to website API
We tested the login api /login and included a set of valid credentials.

As expected, the result will return the credentials are valid and status code 200 from the server. When invalid credentials are provided, the result also will respond expectedly

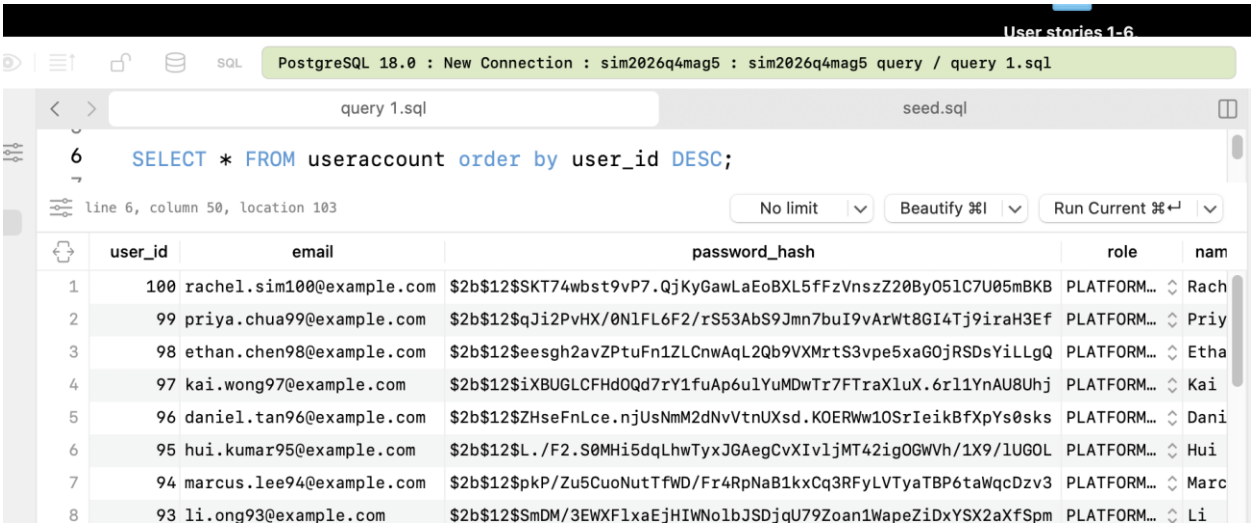

The server will return status code as 400 and an error message.

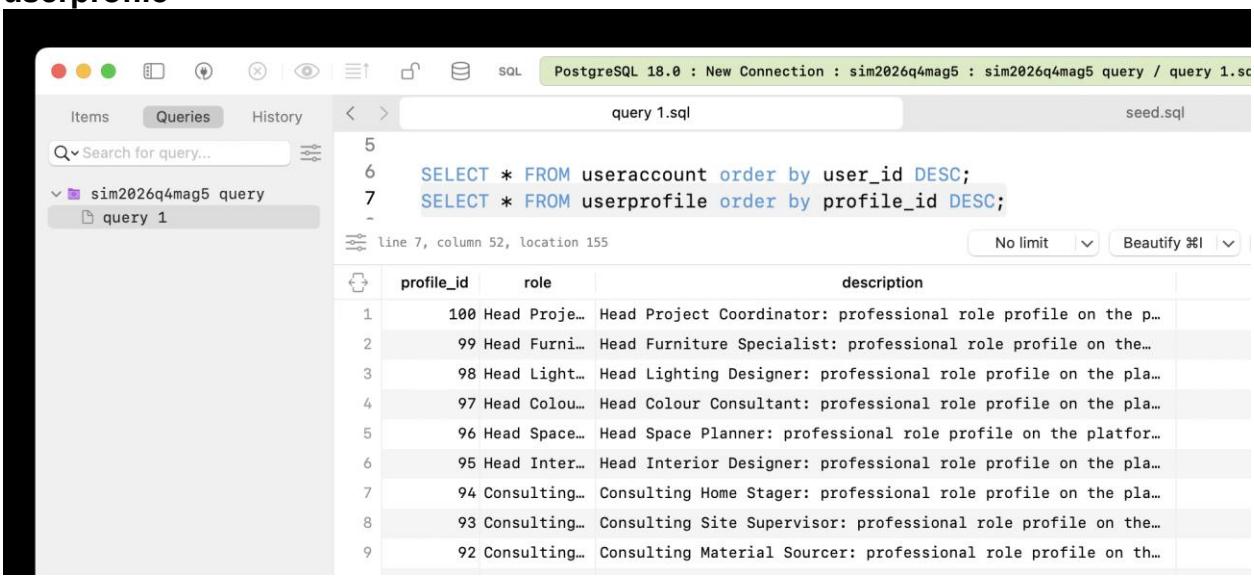

10.2 Test Data Snapshot

This snapshot contains 100 rows of record for each table

11. Data Driven Development

A suitable feature for FindMyID to be developed using a data-driven software development approach is a Personalised Project Recommendation System.

This feature analyses customer browsing behaviour, search history and shortlisted projects to recommend interior design projects that match their interests.

11.1 Use Case

Customers may find it difficult to discover suitable interior design projects when the platform contains a large number of listings. A recommendation system can help customers find relevant projects more efficiently by presenting suggestions based on their interests.

The objectives are to improve project discovery, increase customer engagement and help interior designers reach potential customers.

11.2 Data Collection

The system will collect relevant data from existing platform records and customer interactions, including:

- Customer activity: Projects viewed, searched and shortlisted.
- Project information: Project categories, design styles, room types and descriptions.
- Shortlist records: Projects saved by customers for future reference.

This information will be stored in the FindMyID database and used to identify customer preferences.

11.3 Data Preparation and Analysis

The collected data will be cleansed and organised to ensure consistency and accuracy. For example, duplicate records will be removed, missing information will be handled, and project attributes will be organised into consistent categories.

The system will then analyse customer activity to identify their interests. For instance, if a customer frequently views and shortlists commercial projects, the system can identify commercial designs as their preferences.

11.4 Develop and Evaluate the Recommendation System

A content-based filtering approach can be used to recommend projects with attributes similar to those a customer has previously viewed or shortlisted.

The system will compare customer preferences with available project information and rank projects according to their relevance. The highest-ranking projects will be displayed as recommendations.

The feature will be tested to ensure that recommendations are relevant and that projects belonging to inactive or suspended company profiles are excluded. Its effectiveness can also be evaluated by monitoring how frequently customers view and shortlist recommended projects.

11.5 Integration into FindMyID

After development and testing, the recommendation system will be integrated into the existing application. The backend will retrieve customer activity and generate project recommendations through an API endpoint. The frontend will display these recommendations on the customer's homepage or project discovery page.

The feature will use the existing customer, project, category and shortlist data, with additional activity records collected where necessary.

11.6 Continuous Improvement (CI)

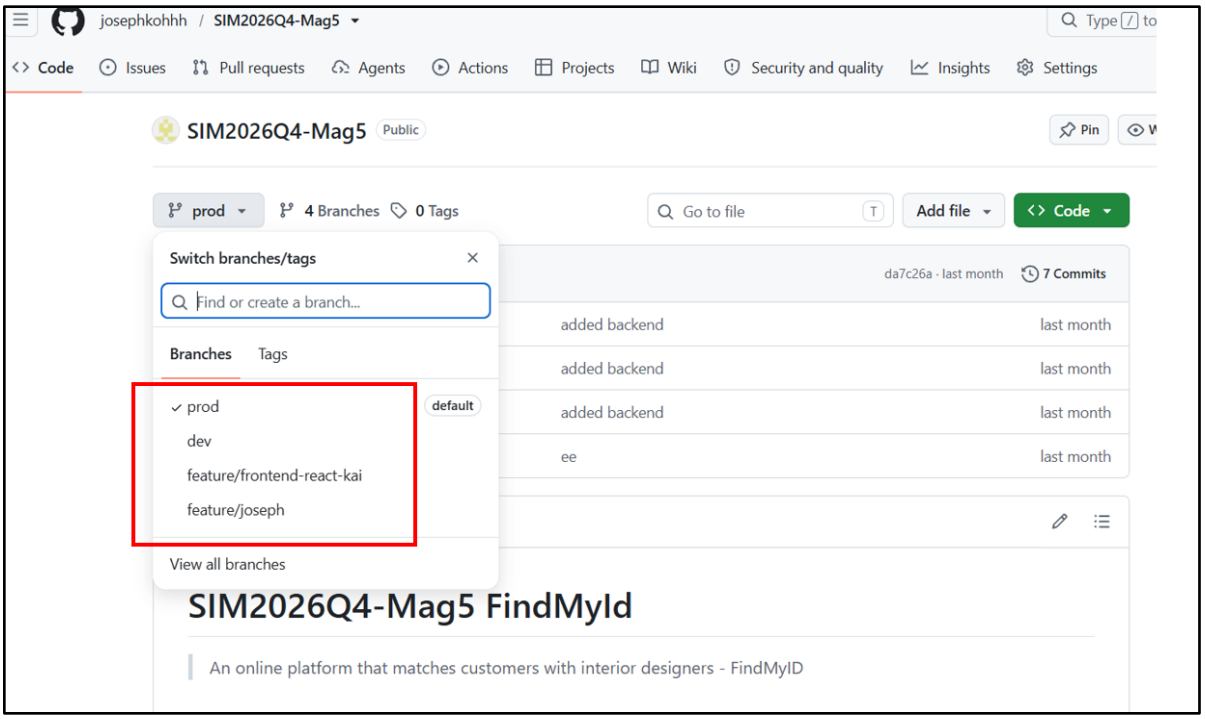

After deployment, FindMyID will continue collecting customer interaction data to evaluate and improve recommendation accuracy. Metrics such as project views, shortlists and customer feedback can be analysed to refine the recommendation algorithm over time.

11.7 Conclusion

The implementation of this feature will make project discovery more efficient by providing recommendations based on actual customer interests and behaviour. It will improve the overall customer experience, increase platform engagement and create more opportunities for interior designers to attract potential customers.

12. Continuous Integration & Delivery (CI/CD)

The following link is our github repository:
https://github.com/josephkohhh/SIM2026Q4-Mag5

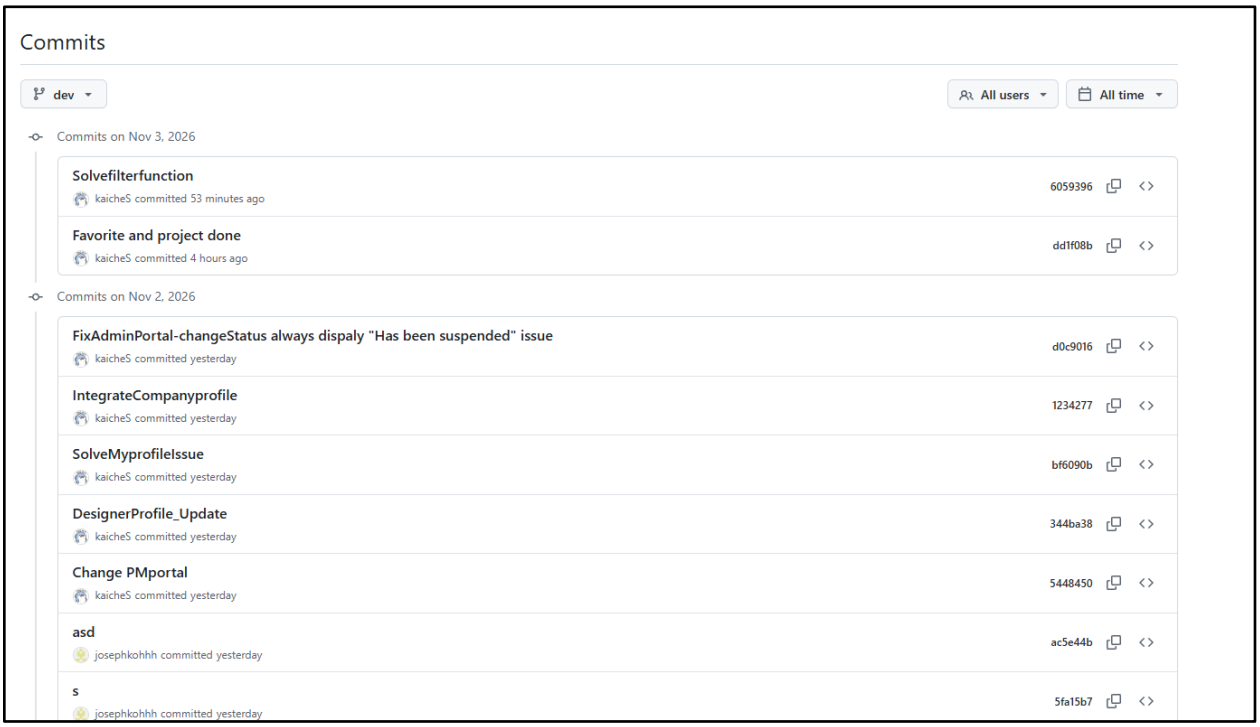

GitHub Branching Strategy

Our project uses 4 branches in GitHub to organise development, manage individual contributions, and maintain code stability.

Branch	Purpose
prod	Contains the stable, production-ready version of the application. No development is allowed on this branch.
dev	Serves as the main development branch where completed features are integrated and tested. Once fully tested, it will be promoted to prod branch via git pull request.
feature/react-kai	Used by Kai Chen and Zhe Kang to independently develop React frontend features without affecting the main development branch.
feature/joseph	Used by Joseph to independently develop FastAPI backend features without affecting the main development branch.

Commit Snapshot

13. Ethical Consideration

User Privacy and Data Protection

One of the main ethical considerations in developing FindMyID is user privacy and data protection. The platform collects personal information such as names, email addresses, phone numbers and company details. To address this, our team ensures that only necessary information is collected and passwords are stored as hashed values rather than plain text. Access to protected functions is also restricted based on user roles to prevent unauthorised access to personal information.

Fairness and Equal Treatment

Another consideration is fairness and equal treatment. FindMyID should provide interior designers with equal opportunities to showcase their projects without unfairly favouring particular designers. Our team aims to ensure that project discovery and recommendations are based on relevant project information and customer preferences. Consistent rules are also applied when managing user accounts, company profiles and project visibility.

Data Accuracy and Integrity

Lastly, data accuracy and integrity are important because customers rely on the information displayed when exploring interior design projects and selecting designers. Incorrect or misleading information could affect their decisions. To address this, our team provides functions for designers to update their company profiles and project details. Database constraints and input validation are also used to minimise invalid or inconsistent information.
