

University of Wollongong

CSCI322

Assignment 1 (Due 05/11/2026)

Task 1: Account and File Management

A training centre has opened a new Linux server. Student and tutor accounts must be migrated to the new system. A file called Accounts.txt contains a username and account type (student or tutor) separated by commas.

- Write a Bash script called setupAccounts.sh to create the groups students and tutors. **(4 marks)**
 - Create user accounts from Accounts.txt and add each user to the appropriate group in a single command.
 - Assign the initial password Welcome123 to all users, create a home directory, and set Bash as the default shell.
 - Record all group and user creation events in syslog.
 - Your script must support any number of accounts in the input file.
- Write a Bash script called reportTutors.sh to produce /tmp/tutors.txt containing one tutor username per line. **(1 mark)**
- Create a crontab entry to execute reportTutors.sh at 7:00 AM and 7:00 PM every weekday. **(1 mark)**

Task 2: System Log Analysis

Using the supplied log file university_access.log to complete the following: **(4 marks)**

- Determine how many DELETE requests appear in the log. Show the command used.
- Write a one-line command to find the most recent GET request for /downloads/course-guide.pdf. Display the hostname and timestamp.
- Write a one-line command to extract all unique course codes under the /courses directory. Save the output to courses.txt, one code per line without duplicates.

Submission

Submit a ZIP file named a1_yourUserID.zip containing all scripts, tutors.txt, courses.txt and answer.pdf with explanations and commands used.
